

I would like to express my support for this action.
Many SSB operators do not respect gentlemen agreements.
The wide modes and narrow modes do not coexist well.
The narrowband operators are usually the ones who then find the band unusable.

I think reserving less than 25% of the 1.8 to 2MHz band for narrowband only
will benefit everyone involved and head off future problem and complaints to the
FCC.

This is also inline with the construction of other HF Bands.
